be separated by rows or columns, as shown in the A1 to A5 and C1 to C5 bands. Both adjacent and non-adjacent ranges can include hundreds or even thousands of cells and flying sheets and workbooks. The ranges are so important in Excel and Google tables that names can be given to certain ranges to make them easier and reused when referenced in charts and formulas. When cells have been selected, they are surrounded by a contour or boundary. By default, this circuit or boundary surrounds only one cell in a sheet at a time, which is known as an active cell. Changes in the sheet, such as editing or formatting data, affect the active cell. When you select a range of multiple cells, changes in the sheet, with a few exceptions, such as data entry and editing, affect all cells in the selected range. Jurmin Tang/EyeEm/Getty Images There are several ways to choose the range in the sheet. These include the use of a mouse, keyboard, the name of the box, or a combination of the three. To create a range consisting of adjacent cells, drag with your mouse or use a combination of Shift and four arrow keys on the keyboard. Use a mouse and keyboard or just a keyboard to create ranges that are not adjacent to cells. When you enter a number of cell links as an argument for a function or when creating a chart, in addition to entering the range manually, the range can also be selected by pointing. The ranges are identified by cell references or cell addresses in the upper left and lower right corners of the range. These two references are separated by the colon. The colon says Excel to include all the cells between these starting and end points. At times the range of terms and array seems to be used interchangeably for Excel and Google Sheets because both terms involve the use of multiple cells in a work book or file. To be precise, the difference is that the range refers to the choice or identification of multiple cells (such as A1:A5), and the array refers to the values located in those cells (e.g. 1;2;5;4;3). Some features, such as SUMPRODUCT and INDEX, accept arrays as arguments. Other features, such as SUMIF and COUNTIF, only accept ranges for arguments. This does not mean that a number of references to cannot be introduced as arguments for SUMPRODUCT and INDEX. These features extract values from the range and them in an array. For example, the following formulas return the result 69, as shown in the E1 and E2 cells in the image. On the other hand, SUMIF and COUNTIF do not accept arrays as arguments. Thus, while the formula below returns the answer to 3 (see E3 cell in the image), the same formula with the array will not be accepted. COUNTIF (A1:A5 As a result, the program displays a message box listing possible problems and fixes. If students know how to reproduce, however, they can calculate much faster that five groups of three can be represented by a 5×3 equation that equals 15. The free sheets below offer students plenty of opportunities to hone their multiplication skills. that give students the opportunity to practice one- and double-digit multiplication facts to 12. Use manipulative elements, physical elements such as gummy bears, poker chips, or small cookies- to show students how to create groups (like seven groups of three) so they can observe in a specific way that multiplication is just a quick way to add groups. Consider using other learning tools such as flash cards to help improve student multiplication skills. Multiplication chart. Print PDF: Multiply Chart Print multiple copies of this multiplication table and give one to each student. Show students how the table works and how it can be used to solve multiplication problems in subsequent sheets. For example, use a chart to show students how to solve any multiplication problem to 12, such as $1 \times 1 \times 2$, 7×8 and even $12 \times 12 \times 144$. Random Sheet 1. Print PDF: A one-minute drill this sheet containing unambiguous multiplication is perfect for giving students one minute exercise. Once students have learned the multiplication table from the previous slide, use this print as a preliminary test to see what the students know. Just hand out the print to each student and explain that they will have one minute to answer as many multiplication problems as they can. When students complete a one-minute sheet, you can write down their scores in the top right corner of the print. Random sheet 3. Print PDF: One-one multiplication practice Once students have completed one-minute exercises from previous slides, use this printed to give them more practice to do unambiguous multiplication. How students work circulate around the room to see who's who multiplication process and which students need additional learning. Random sheet 4. Print PDF: More single-adult multiplication No method works better for teaching students than repetition and practice. Consider providing this print as a homework assignment. Contact your parents and ask them to help by having a one-minute exercise for their children. It shouldn't be hard to get parents to get involved as it only takes a minute. Random sheet 5. Print PDF: Single-million drilling This printed is the latest in this series, which contains only unambiguous multiplication. Use it to give a last minute drill before moving on to more difficult multiplication problems in the slides below. If students are still struggling, use manipulatives to reinforce the concept that multiplication is only a quick way to add groups. Random sheet 6. Print PDF: The one- and double-digit multiplication this printed introduces double-digit problems, including several problems with 11 or 12 as a factor - the numbers that you multiply together to calculate the product (or answer). This sheet may intimidate some students, but it doesn't have to be complicated for them. Use the No.1 slide multiplication chart to see how students can easily get answers to problems related to 11 or 12 as factors. Random Sheet 7. Print PDF: One- and double-digit drilling Use this printed to give students another minute of drilling, but in this case the problems have one- or double-digit factors. In addition to several problems with factors 11 or 12, several problems have 10 as a factor. Before you give the exercise, explain to students that to find a product of two numbers where one of the factors is 10, just add zero to the number multiplied by 10 to get your product. Random Sheet 8. Print PDF: Homework one- and Two-Digit Drill This printed should be a confidence enhancer for students as they continue to improve their level of knowledge with multiplication facts. It contains only two double-digit problems, both with 10 as a factor. So it would be a good sheet to send home as homework. As before, involve parents to help their children hone their math skills. Random Sheet 9. PRINT PDF: Random one- and double-digit problems use this print as a cumulative score test to see what students have learned by this point. Students have their multiplication tables stacked. Don't give this test as a minute exercise. Instead, give students 15 or 20 minutes to complete the sheet. If students show that they have learned their multiplication facts pretty well, go for the follow-up sheets. If not, see how to solve multiplication problems and allow students to repeat some of the previous sheets. Random sheet 10. Print PDF: Random Problems If students have struggled to learn their multiplication facts, use this sheet of random one- and double-digit problems as both Reviews. This printed should be a confidence enhancer, since most of the problems it contains are unambiguous, and only double-digit problems include 10 as a factor. 2 Times tables. Print PDF: 2 Times Tables This print is the first in this series that uses the same factor, in this case, the number 2 in each problem. For example, this sheet contains problems such as 2×9 , 2×2 and 2×3 . Repeat the multiplication table and start walking through each column and chart row. Explain that the third row across and the third row down contain all the multiplication facts 2. 3 Time tables. Print PDF: 3 Times Tables This printed gives students the opportunity to practice multiplication problems where at least one factor is the number 3. Use this sheet as a homework assignment or for a minute's exercise. 4 Time tables. Print PDF: 4 Times Tables This printed gives students the opportunity to practice multiplication problems where at least one factor is the number 4. Use this sheet as a homework item. This provides an excellent opportunity to allow students to practice at home. 5 times the tables. Print PDF: 5 Fold Tables This printed gives students the opportunity to practice multiplication problems where at least one factor is the number 5. Use this sheet as a minute's exercise. Six time tables. Print PDF: 6 times table This printed gives students the opportunity to practice multiplication problems where at least one factor is the number 6. Use this sheet as a homework assignment or for a minute's exercise. 7 time tables. Print PDF: 7 Fold Tables This printed gives students the opportunity to practice multiplication problems where at least one factor is the number 7. Use this sheet as a homework assignment or for a minute's exercise. 8 time tables. Print PDF: 8 Fold Tables This printed gives students the opportunity to practice multiplication problems where at least one factor is the number 8. Use this sheet as a homework assignment or for a minute's exercise. 9 Times Tables. Print PDF: 9 Fold Tables This printed gives students the opportunity to practice multiplication problems where at least one factor is the number 9. Use this sheet as a homework assignment or for a minute's exercise. 10 Times tables. Print PDF: 10 Times Tables This printed gives students the opportunity to practice multiplication problems where at least one factor is the number 10. Remind students that to calculate any product, just add zero to the number multiplied by 10. Print PDF: Doubles Times Tables This printed feature doubles the problem where both factors are the same number, such as 2×2 , 7×7 , and 8×8 . This is a great opportunity to view the multiplication table with students. 11 Times tables. Print PDF: 11 Times Table This sheet features a problem where at least one factor is 11. Students can still be intimidated by these these but explain that they can use their multiplication tables to find the answer to every problem on that sheet. Tables 12 times 12 times tables. Print PDF: 12 Times Tables This printed offers the most complex problems in the series: Each problem includes 12 as a factor. Use this print several times. On the first attempt, let students use their multiplication tables to find products; On the second, students solve all the problems without the help of their multiplication chart. On the third attempt, give students one minute of exercise using this seal. Print. medical specialties matching worksheet. medical and dental specialties worksheet answers
